

Crop Audit PlusTM

Crop Management/Cost Accounting

A tale of three grain producers — each struggling with a crop management system that does not meet his needs:

PRODUCER A has a problem keeping accurate field summaries on a year-to-year basis. It's because his system defines a "field" by its current crop configuration and not by permanent physical boundaries. If he plants an 80-acre field in corn one year then decides the following year to split the field equally between corn and soybeans, his system will have created three separate fields (one 80 acres, two 40 acres) on

the same plot of land in two years time.

This continual recycling of fields not only complicates his record-keeping, it breaks the continuity necessary to establish a reliable multiyear field history.

PRODUCER B spent considerable time setting up his system. Now he labors long and hard with its day-to-day operation. Slow data entry and the effort required for the most basic adjustments are major annoyances.

Moreover, the system won't allow him to automatically correct for discrepancies between inputs planned and inputs actually applied. As we all know, the "intended" rates for seed

and chemical applications (those reflected in planter or sprayer settings) never precisely match what actually falls on or into the soil. So if he wants accurate input records, he must program each correction manually, a tedious chore for which he has neither the time nor inclination.

PRODUCER C wants a detailed cost analysis on every crop so he can determine profitability by crop and by farm. He would also like to reconcile individual expenses and sales with each landlord. He can't do either because his system doesn't integrate with an accounting program.

There's no way he can match actual input costs against appli-

cations, and develop a comprehensive yet simple method for allocating machinery and labor expenses, plus other indirect costs, to each crop.

Crop Audit Plus has the easy key to each producer's problems.

The best field histories are built on permanent boundaries.

Crop Audit Plus defines a field by its original boundaries. The perimeter and area remain constant year to year. They don't vary when you switch crops or enterprises, so you have total freedom to alter crop acreages within the field.

Perpetual histories give you more accurate summaries and more dependable data for sound strategic planning and precise field histories.

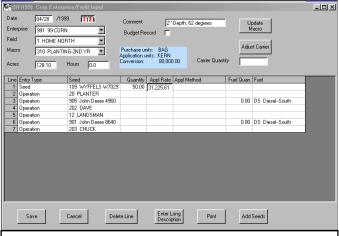

Data entry is simple, quick — sometimes down to one keystroke.

The use of "macros" in Crop Audit Plus simplifies and speeds data entry. In just one step, you can recall and record a whole series of operations and applications.

For example, a single entry of a planting macro automatically updates the details of a score of items and functions, as shown in the following screen illustration.

Input "macros" allow you to record multiple operations and products in a single entry.

You'll also breeze through the adjustments needed to balance input inventories. Again, with minimum effort (only four key strokes), you'll make "global" changes that automatically correct for the unavoidable variances between planned application rates and the actual amount of seed, fertilizer or chemicals used.

System Integration: comprehensive cost analysis; true profit tracking

Crop Audit Plus functions as a stand-alone system. But it also integrates with FBS's TransAction Plus™ accounting system. The result is a valuable set of financial data no other brand of software can deliver. It includes an integrated cost analysis on every crop, plus the means to measure profitability by both crop and farm.

You can also reconcile expenses and sales with each landlord and match actual input costs against applications. And you now have a sure, instant way to allocate machinery, labor and other indirect costs to each crop.

Finally, you'll appreciate the ease and flexibility of Crop Audit Plus—TransAction Plus link in automating two common scenarios:

1. Store in inventory

- If you purchase seed, chemicals or fertilizer before the crop season (even in the prior accounting year), you don't have to allocate these materials to specific crops, farms or fields in TransAction Plus. A cost basis inventory is automatically created at the same time these purchases are expensed for tax purposes.
- When the materials are applied to the field, you just record in Crop Audit Plus the rate per acre in pounds, kernels, pints, etc., or the total quantity used. Costs are automatically assigned to the crop, farm and field levels.
- In inventory by location indefinitely and then sold through TransAction Plus.

2. Direct entry

 You can code crop applications and even custom rate changes directly to the crop, farm and field as you record them in Transaction Plus accounting. TransAction Plus also allows you to record harvest data (yields, varieties, moisture) for crops sold directly out of the field.

Boundary hunter ... easy runner ... exclusive integration. Not even close to getting matched. And so far we've mentioned only a few reasons why Crop Audit Plus is the one for you.

Everything you'll ever need for those vital management decisions.

You can already see that Crop Audit Plus far exceeds any ordinary field records program as a complete management discipline for planning, producing and marketing crops more profitably, more easily.

However, a constant stream of improvements from more than a decade of upgrades has kept the system state of the art. Many of the changes originated as client requests. Our purpose is to maintain a balance between ease-of-use features and power and performance capabilities. We want to be sure you spend more time where it counts—on your data, not the keyboard. Here's a sampling of those refinements:

- √ Compliance with USDA Restricted Use Pesticide(RUP) private applicator regulations plus Reentry Hours
- √ Maintains FSA farm numbers and legal description
- √ Built-in crop budgets help you plan cash-flow needs and project break-evens
- √ Field Work Order worksheets verify that the right job is done at the right time in the right field
- √ Perpetual seed, fertilizer and chemical inventories assure accurate charge of input costs to correct field
- √ Perpetual crop inventories track crops by location from harvest through sale
- √ Multiyear reports help identify the most productive practices or varieties across and within fields, crops and farms
- Harvest and sales automatically adjust each load by weight and moisture from user-defined shrink tables
- $\sqrt{}$ Multiple harvest units can track bales/tons/modules
- √ All reports feature drill-down spreadsheet export
- \bigvee Report Generator creates custom reports and graphs
- √ Imports yield monitor and GIS data
- √ Rapid entry through production "macros" and directly through TransAction Plus accounting

A growing variety of field data entry solutions.

FBS's **MACH 2.0 Interface** now imports application and harvest data from these field data collection technologies into Crop Audit and the exclusive FBS integrated production/financial management system.

FBS imports data from a wide range of field, agronomic and market data sources to save time, eliminate duplication and provide real-time comprehensive cost analysis and inventory control.

Now exceed MACH 2.0 through real-time, "cloud" API synchronization with Conservis for seamless integration.

"When I first tried Crop Audit in March of '84, I realized you sold a quality product — well conceived, written and supported. The years and programs since have only reinforced and heightened that opinion. FBS has been very much a part of our success in a world of narrow margins, increasing regulatory record-keeping and fleeting opportunities."

Don Anthony, Lexington, Neb.

"Crop Audit Plus is excellent in summarizing inputs and tracking inventories. Catching a 'double-pay' on a seed variety saved is \$5,000. The cost analysis report and the ability to track inputs by field are extremely helpful. Having all the information in one integrated package and one-step data entry greatly simplify the process. If we ever have a problem, you tech staff is always willing to help solve it."

Daryl Ellis, Jorgensen Farms, Ideal, S.Dak.

"Having our production records and our accounting all integrated together allows us to spend more time to doing things and less time fiddling around doing busy work. We're able to do what we need to do and still have the data we need to make production decisions."

Mike Paustian, Walcott, Iowa

Others sell you software. We offer you SERVware™.

There's a difference. The software you choose to help run your farm should be thought of not as a product, but a service. True business software represents the service discipline in much the same manner as a records manager. Accountant. Financial analyst. Even an executive consultant. These are professionals you engage to enhance your management skills, minimize your production costs and build your bottom line

Sometimes this vital aide on a paper-thin disk needs the backing of able, responsive training and support. Again, we're talking service. SERVware from FBS. Unlike ordinary software, it's service, all service, from the beginning.

So, if you judge farm software solely on price, you may be settling for a mere product—like an item bought at a discount store—ignoring the singular quality that distinguishes the right choice. Service.

But don't take our word for it. Talk to our clients and order a

CAPABILITIES

CROP INVENTORIES

- · Daily market value updates
- By storage location
- By commodity/owner

OPERATIONS

- Can separate tractor, implement or operator
- · Custom rates by acre, hour, mile or unit
- Tracks irrigation costs
- Custom machinery charges
- Allows scouting entries (pest, populations, etc.)

APPLICATIONS

- Globally adjust tank mixes using carriers
- Two simultaneous quantities
- Stores application method and comments
- Stores fertilizer analysis
- Records reentry intervals
- Cost-basis, perpetual inventories
- Multiple pricing options

MISCELLANEOUS

- Stores rainfall, soil/leaf tissue tests and fertilizer recommendations
- Budget records generate buying requirements, work schedules, enterprise budgets, and convert to actual
- Macro data entry
- Allows global adjustment to balance input inventories
- Links purchases, sales and inventories from TransAction Plus
- Links with optional Contract Module
- Overhead allocation table
- Harvest stored by variety, ticket, field, crop and storage location

REPORTS

- Crop History
- Field History
- Cost Analysis
- Crop Input Inventory
- Matrix Inventory
- RUP Chemical Applications
- Field Summary
- Investment in Growing Crops
- Field Work Orders
- Report Generator
- Landlord Report
- Project Reports
- Project Performance
- Report by Task

system

Integration — the easiest route to a sure handle on production costs

Do you know your exact cost of raising crops or livestock? If not, you could be losing a fortune in needless expenses.

Perhaps you do have some fix on these costs, but ask yourself: Do I always get the data in time to be helpful? Can I count on the accuracy? How many different programs am I using to get these numbers?

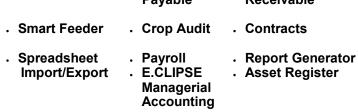

There's a simple solution: Integrated production-financial record-keeping, in which component modules share information. The key benefit is a cost-accounting capability that gives you complete, precise information the instant you need it. The only thing better is a full-time staff of accountants on your farm.

Yet you needn't be an accountant to run an integrated system. It's easier than you think. For example, interlinked modules function seamlessly as one unit. You only have to enter data one time. If you're operating three separate programs stand-alone, you know the advantage here. Just one time-saving convenience among a score of others.

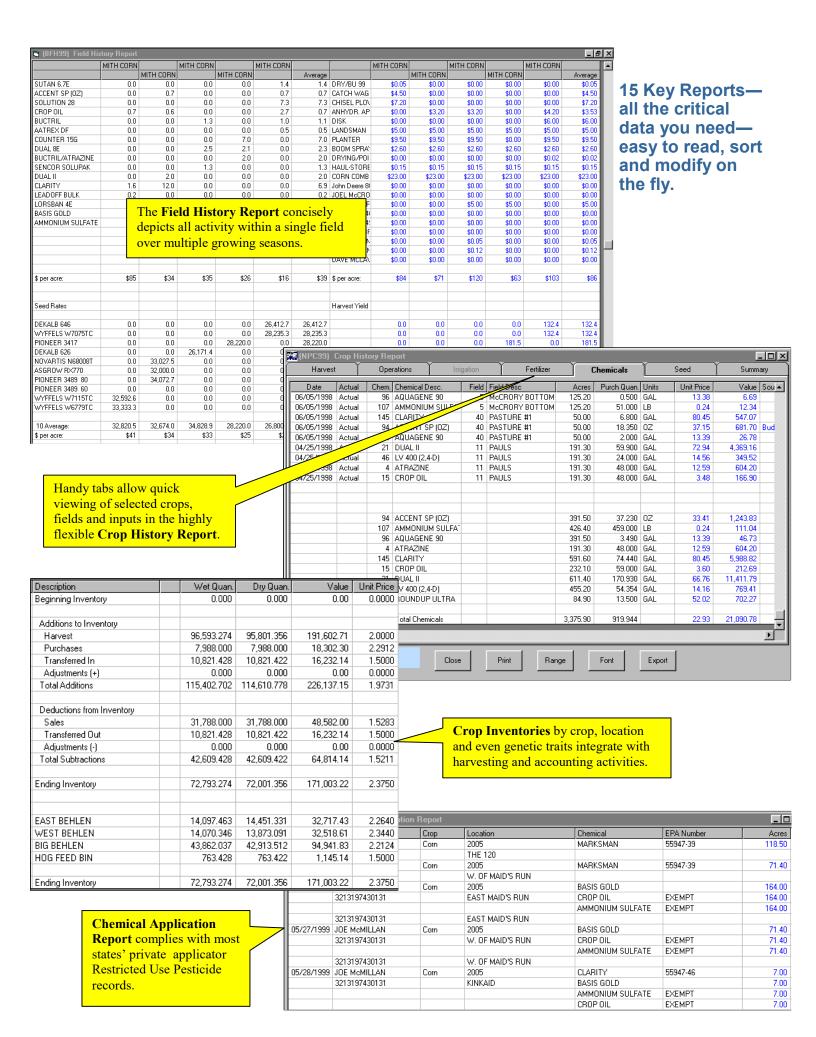

Now, where to turn for a fully integrated management information system? We pioneered the concept 18 years ago and have taken it to levels that may never be matched. Build
